STATUS OF THE CLAIMS

- 1-31. (previously cancelled).
- 32. (previously presented) A cell culture exhibiting cell-type specific or development-specific expression of a non-cell damaging fluorescent protein comprising embryoid bodies formed by aggregates of embryonic stem cells stably transfected with a DNA construct comprising:
- a) a DNA sequence coding for said non-cell damaging fluorescent protein; and
- b) a promoter operably linked to said DNA sequence, said promoter selected from the group consisting of a cell-type dependent promoter, a development-dependent promoter and combinations thereof, wherein said promoter is substantially inactive in undifferentiated embryonic stem cells.
- 33. (previously presented) The cell culture of claim 32, wherein said stem cells are mouse stem cells.
- 34. (previously presented) The cell culture of claim 32, wherein said aggregates are obtained by the hanging drop method.
- 35. (previously presented) The cell culture of Claim 32, wherein said non-cell damaging fluorescent protein is selected from the group consisting of Green Fluorescent Protein, Red Fluorescent Protein, and Blue Fluorescent Protein.
- 36. (previously presented) The cell culture of claim 32, wherein said promoter is a promoter specific for heart cells, neurons, glia cells, hematopoietic cells, endothelial cells, smooth muscle cells, skeletal muscle cells, cartilage cells, fibroblasts and epithelial cells.
- 37. (previously presented) The cell culture of claim 32, wherein said promoter is selected from Nkx-2.5, human alpha-actin, and MLC-2V promoters.

- 38. (previously presented) The cell culture of claim 32, wherein said promoter is the heart-specific human alpha-actin promoter.
- 39. (previously presented) The cell culture according to claim 32, wherein said DNA construct comprises further functional elements.
- 40. (previously presented) The cell culture according to claim 39, wherein said further functional DNA elements are selected from the group consisting of enhancer elements, selectable marker genes, or combinations thereof.
- 41. (previously presented) The cell culture of according to claim 32, wherein said DNA construct is the plasmid pCX-(a-act)GFP-Neo (DSM 11633).
 - 42-53. (presently cancelled).
